Summary — Frontend React Developer with 2 plus years of solid experience in developing responsive dynamic web applications. Proficient in TypeScript, React JS and other modern frontend frameworks such as Next JS, Material UI. Experience in high focus on UX/UI design, performance optimization and responsive development. History of providing rapid results in high velocity environments and possessing experience working with cross functional teams to streamline client requirements.

Skills

Languages Javascript (ES6+)

Automation Playwright

Unit Testing Jest, React Testing Library

Front-end Typescript, React JS, Next JS

State Management Redux, Context API

UI Technologies HTML5, CSS3, Material UI

Back-end Node JS, Express JS

Database MongoDB

Experience

Infenox Technologies

Mar 2023 – Present

Associate IT Consultant

- Extensive Experience as a MERN Stack Developer: Demonstrated expertise in developing web applications using the MERN (MongoDB, Express, React, Node.js) technology stack.
- Agile Development Knowledge: Good understanding of Agile methodologies, including Scrum or Kanban, for efficient project management and iterative development.
- Web Application Development: Skilled in developing and maintaining web applications, ensuring their functionality, performance, and scalability.
- Database Management: Experience in database design and management, with a focus on MongoDB for NoSQL data storage.
- API Integration: Proficient in integrating third-party APIs and services to enhance the functionality of web applications.
- Continuous Learning and Adaptation: Ability to stay updated with the latest trends and technologies in web development to ensure the use of best practices.

Education

Indira Gandhi National Open University

June 2023 - Present

Bachelor of Computer Applications

pursuing

Government Polytechnic College Kaduthuruthy

June 2013 - April 2016

Diploma In Electronics Engineering

Projects

Acuity Brands. Co

June 2023 – Present

IoT Based Project

- Led the front-end development of an IoT based web application for Acuity Brands, a US-based leader in lighting, controls, and building management, to monitor lighting control systems at construction sites.
- Engineered React applications utilizing Material UI within a micro frontend architecture.
- Hands-on experience in unit testing using Jest and executing end-to-end tests via Playwright.
- Cultivated strong client relationships that led to a 30 percentage increase in project satisfaction scores, implementing active listening techniques and personalized solutions tailored specifically to meet individual client needs.

Filter 4 Life

Mar 2023 – May 2023

B2C Storefront Web Application

- This project provides a B2C storefront solution for Filter4Life, enabling sales of the flagship Air Filtration System for furnaces designed in Canada.
- The website is powered by React, Next JS and Bootstrap on the frontend and Node/mongoDB stack on the backend. Internationalization and shipping to multiple regions are enabled.
- Got exposure in crafting responsive designs using HTML, CSS, and Bootstrap, established a solid foundation in React, Next JS and adeptly managed tasks using JIRA to ensure efficient project management.
